B. City LiDAR 2015, two weeknights (Sun–Mon west of Walkley, Mon–Tue east; 00:00–03:50 local), before the lane: car-shaped objects counted by eye on
the height raster (light), of which found by the automatic detector (dark)
183 cars by eye, 85 detected
Distance along rue de Terrebonne from the west end of the lane (m)
Side where the lane would become parking each winter (the proposal, as the councillor described it)
