Project

Cycling network in CDN-NDG

Last updated October 24, 2025 • Reading time: 2 min

Related to **Cycling and bike paths**

The CDN-NDG bike path network covers approximately 40 km, with nearly 17 km of dedicated bike lanes, some of which are accessible year-round. This cycling network is designed to foster harmonious cohabitation and ensure that users of all transportation modes can share the roads more safely.

PROJECTS AND IMPROVEMENT OF CYCLING INFRASTRUCTURES IN CDN-NDG

In addition to improving safety for cyclists, the new infrastructures and development projects will:

- Meet the growing demand for cycling infrastructures.
- Improve shared mobility spaces for each mode of transportation.
- Promote active mobility.
- Improve west-east and south-north connectivity for cyclists: access to several parks, higher education institutions and health establishments, and to local childcare centres and schools.
- Help reduce greenhouse gas emissions.

- Édouard-Montpetit from Lemieux to Côte-des-Neiges (unidirectional bicycle lane protected by parking)
- Walkley, between Côte-Saint-Luc and Terrebonne (two-way bicycle lane, protected by bollards and parking)
- Lacombe, between Lemieux and McKenna (unidirectional bicycle lane protected by parking)

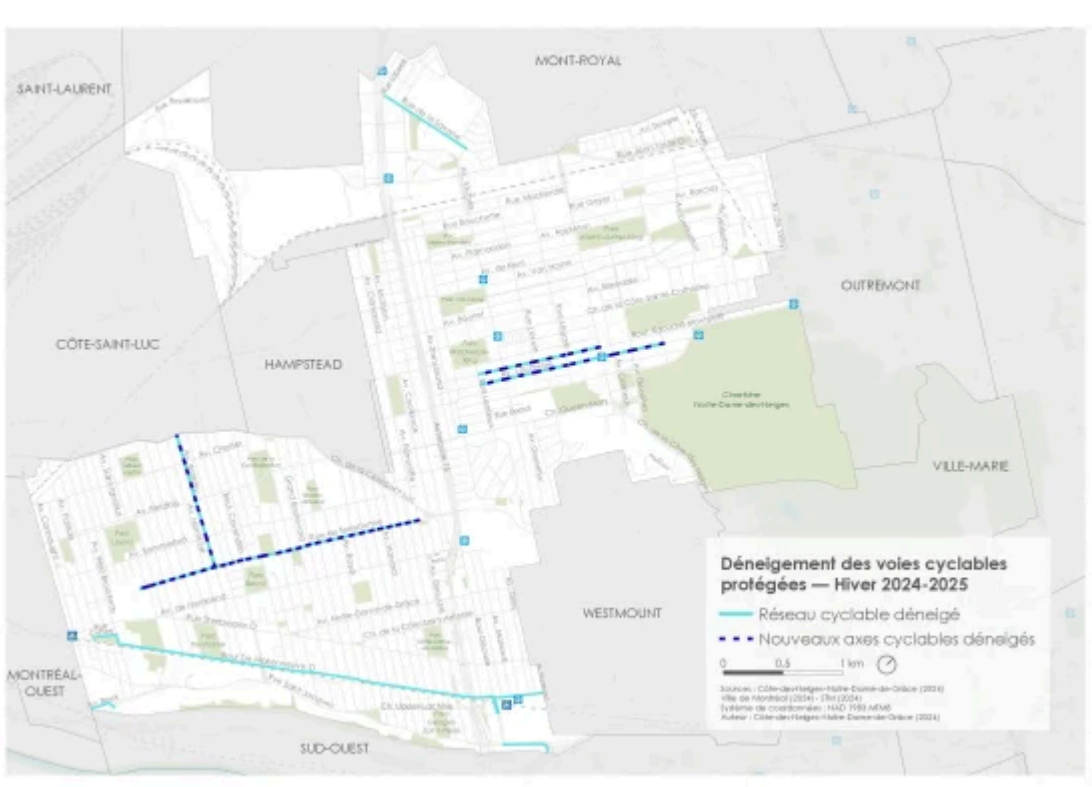

The other protected bike lanes will be gradually removed for the season starting November 15 to allow on-street parking again.

Effective April 1, protected bike lanes will be re-established on these streets and people parking their vehicles will be required to leave the bike path clear near the sidewalk.

To achieve this

- Monitoring of the network's condition is carried out by our teams.
- Signage is deployed to ensure compliance with the clearance distance between the sidewalk, bike path, and parking areas.

Have you noticed that the snow has not been adequately cleared from a bike path? Please report the problem to us so that a crew can take corrective action as soon as possible.

Map of the bike path

Montréal is a city of cyclists. Its vast bike path network spans 901 km and allows users to get around with ease on streets as well as in parks and along the shoreline.

This map lets users view Montréal's bike path network, identify the types of paths that it features, and find bike lanes in the vicinity of their geolocation or a specific address.
