The LiDAR surface, block Hingston to Hampton, seen obliquely from the south, vegetation removed: the parked cars stand out

City of Montréal airborne LiDAR 2015, flown at night before the lane; height above ground on a 0.4 m grid, lit from the north-west, every cell coloured by its height class. Red = objects of car height at the curbs and in the driveways; dotted lines = the driving lanes; dashed red = the side the proposal would turn into winter parking.

ground, pavement, lawns (< 0.3 m)
low objects: fences, hedges, steps (0.3–0.9 m)
car height (0.9–2.3 m): parked cars
garages, sheds, vans, porches (2.3–3.6 m)
houses (> 3.6 m)
Side where the lane would become parking each winter (the proposal, as the councillor described it)
