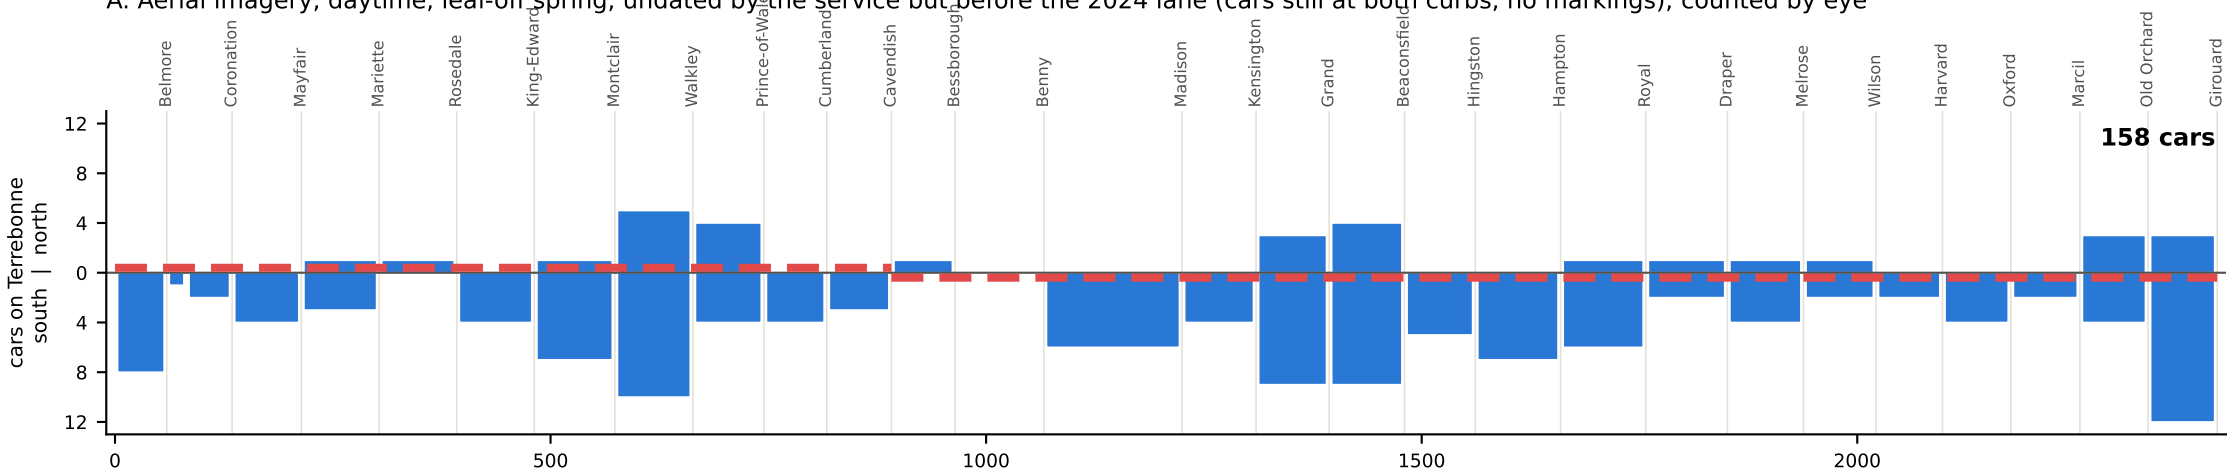
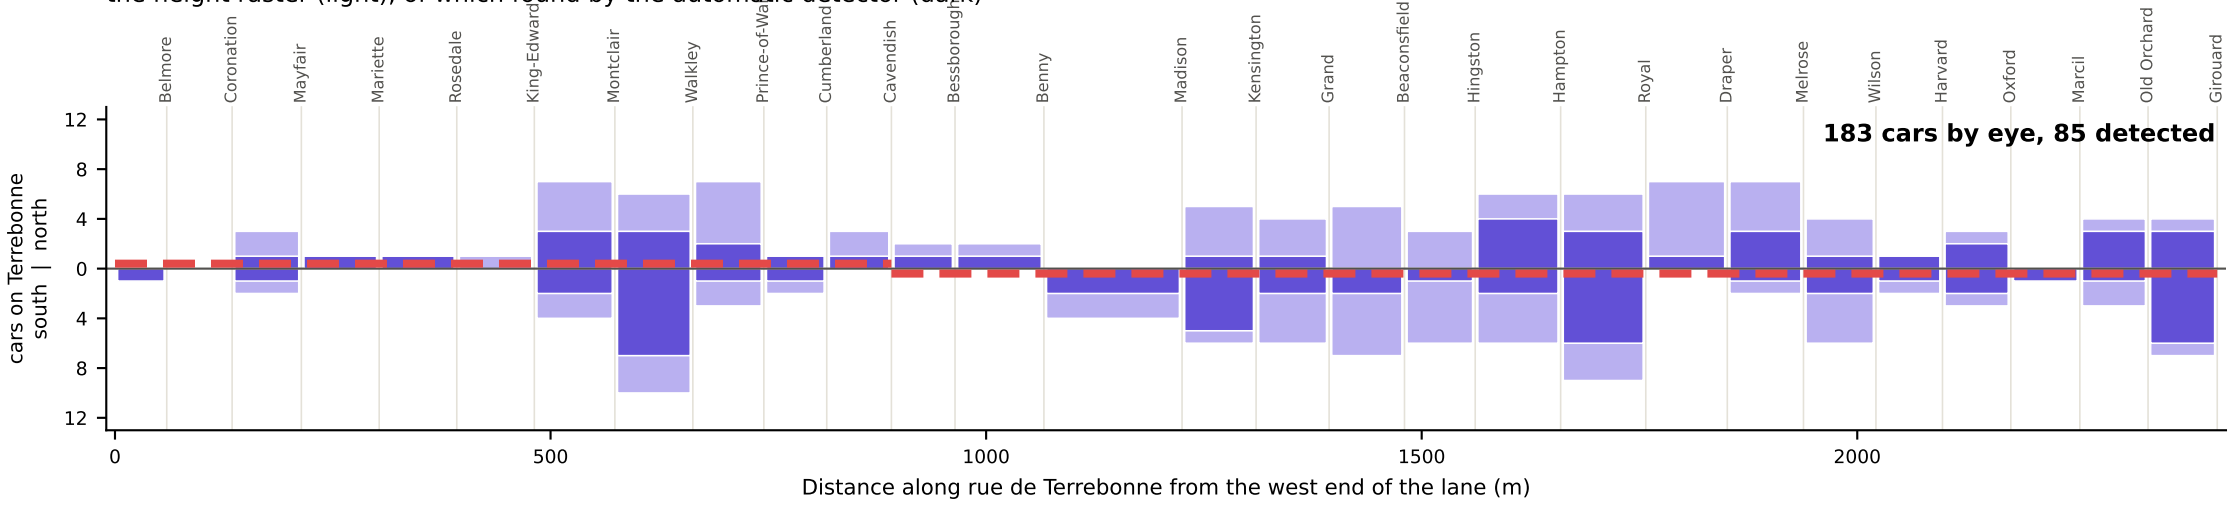
A. Aerial imagery, daytime, leaf-off spring, undated by the service but before the 2024 lane (cars still at both curbs, no markings); counted by eye



B. City LiDAR 2015, two weeknights (Sun–Mon west of Walkley, Mon–Tue east; 00:00–03:50 local), before the lane: car-shaped objects counted by eye on the height raster (light), of which found by the automatic detector (dark)



Side where the lane would become parking each winter (the proposal, as the councillor described it)
