Block Hingston – de Hampton: what a LiDAR car detection looks like

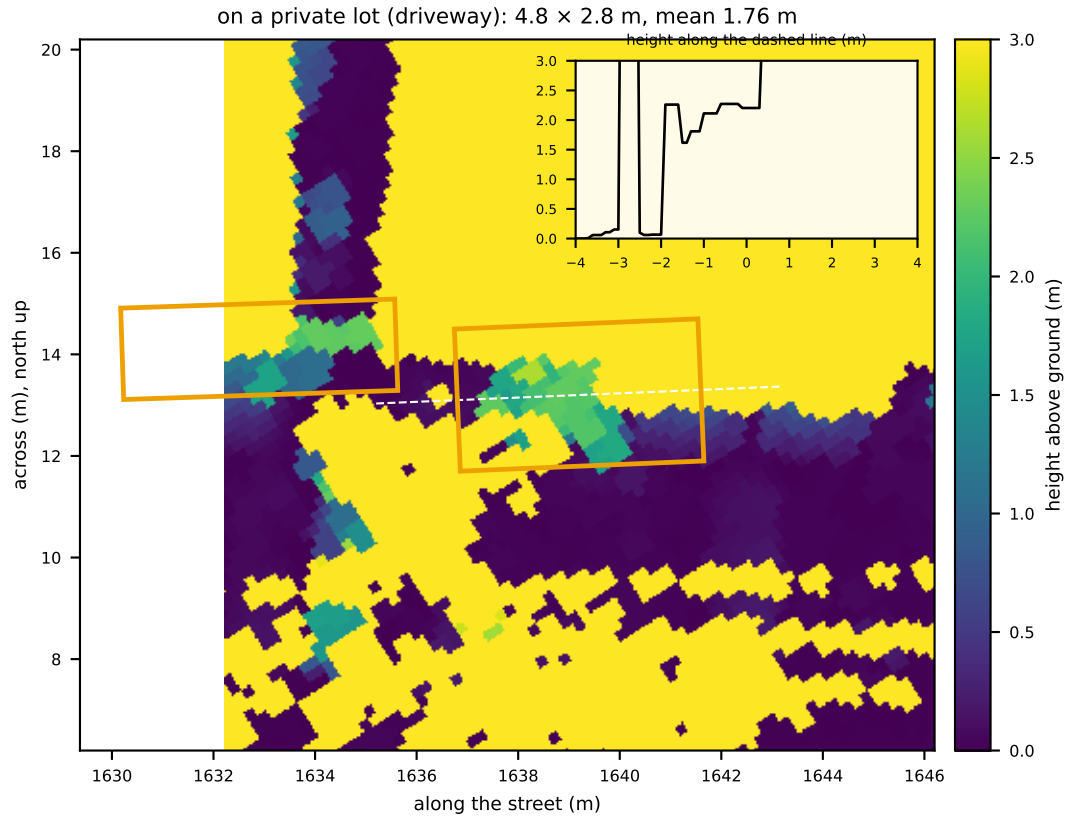

Aerial imagery, daytime, undated (before the 2024 lane); boxes = the night LiDAR detections, for position only

City LiDAR 2015, night: height above ground; each box has the measured length and width of the object; dotted lines: the curb band 2.2–7 m from the street axis

LiDAR 2015 (night): car-sized object at a Terrebonne curb
on a private lot
on a cross street
Side where the lane would become parking each winter (the proposal, as the councillor described it)
